#### **DETAILED ACTION**

Any rejections and/or objections, made in the previous Office Action, and not repeated below, are hereby withdrawn.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Tomita et al. (EP 1 232 999).

Tomita et al. discloses a method of making a crystalline molecular sieve in which a dried gel containing a source of silica and TPA (an organic templating agent) is slurried, the slurry is spray dried and the spray dried gel is crystallized in a box containing steam. See Example 23, Paragraphs [0198], [0201], and [0204].

The process makes a material having the MFI topology. Id.

Application/Control Number: 10/671,313

Art Unit: 1755

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3-6, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomita et al. (EP 1 232 999) as applied to claim1 and further in view of the knowledge of one of ordinary skill in the art.

As noted above, Tomita et al. discloses a method of making a zeolite which anticipates the present claims. The reference differs from the present claims by failing to disclose adding alkali metal oxide to the aqueous slurry as recited in claim 3, or a source of one of the oxides of 4, 5, and 9. However, it is notoriously well known in the art to add such materials to a zeolite reaction mixture.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have added alkali metal oxides or additional metal oxides to the gel reaction mixture of Tomita et al. because such oxide addition is known to facilitate the crystallization of zeolites.

## Allowable Subject Matter

Claims 10-17 are allowed.

Art Unit: 1755

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Sample whose telephone number is (571)272-1376. The examiner can normally be reached on Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on (572)272-1233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
